GIZA®
Vertebral Body Replacement System

The latest addition to Stryker's VBR Portfolio
GIZA VBR System Highlights

- Rotatable superior endplate with variable lordotic angles
- Locking screw to help ensure distraction is maintained
- Fenestration to promote vascularization during the fusion process
- Optional in-situ insertion of bone graft
- Titanium alloy material offers mechanical integrity during insertion and distraction, x-ray visibility, and biocompatibility*

*Data on file

One inserter and screwdriver is used to attach the implant to the inserter and engage the locking screw to maintain distraction.

Rotate the Endplate Holder 180° to adjust lordosis of the superior endplate.

The GIZA Vertebral Body Replacement System is indicated for use with Stryker Spine plate or rod systems including the Xia® Spinal System, Radius® Spinal System, Trio®+ Spinal System, Mantis® Spinal System, or Thor® Plating System.
