UniVise™
Spinous Process Fixation Plate System

The only device on the market that currently allows for midline insertion and locking

LESS INVASIVE
Less invasive alternative to traditional open-procedure pedicle screw construct¹

MINIMIZED MUSCLE RESECTION
Midline approach with centralized locking mechanism designed to help reduce lateral exposure and minimize muscle and soft tissue disruption

SIMPLE, ONE PIECE IMPLANT DESIGN
No assembly required

SINGLE INSTRUMENT FOR INSERTION AND LOCKING
Streamlined instrumentation for the OR
When the UniVise Spinous Process Fixation Plate is used as supplemental fixation in interbody fusion procedures, its use is limited to the treatment of degenerative disc disease (DDD) of the lumbosacral spine.

1. Data on File

A surgeon must always rely on his or her own professional clinical judgment when deciding whether to use a particular product when treating a particular patient. Stryker does not dispense medical advice and recommends that surgeons be trained in the use of any particular product before using it in surgery.

The information presented is intended to demonstrate the breadth of Stryker product offerings. A surgeon must always refer to the package insert, product label and/or instructions for use before using any Stryker product. Products may not be available in all markets because product availability is subject to the regulatory and/or medical practices in individual markets. Please contact your Stryker representative if you have questions about the availability of Stryker products in your area.

Stryker Corporation or its divisions or other corporate affiliated entities own, use or have applied for the following trademarks or service marks: AVS, AVS Anchor, LITe, Stryker, UniVise. All other trademarks are trademarks of their respective owners or holders.
