MIDLINE RETRACTOR

# LITe Midline Retractor

## EXPERIENCE THE DIFFERENCE. EXPERIENCE INNOVATION.

The Stryker LITe Midline Retractor System employs a uniquely shaped retractor blade to sit directly atop the facet capsules to facilitate a less invasive midline incision.

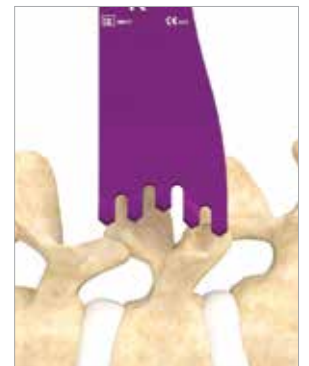

■ Retractor can be oriented cephalad/caudal.

■ Lighting system is designed to deliver bright LED light through dual light ports to optimize visualization.

■ System compatible only with Phantom Light Source (48252106) and Lateral Phantom Light Cable with Tedan Connector (48758451).

■ Pivoting mechanism is designed to increase exposure without enlarging the incision.

Left and right retractor blades sit atop the facet joint. Blade teeth are designed to enhance retraction during less invasive midline procedures.

# Retractor Blades

All LITe Midline Retractor Blades are radiolucent and excellent for procedures using fluoroscopy.

■ Cross cut connector is designed to prevent rotation of blade while attached to the blade handle.

■ Two Blade Configurations: Wide and Narrow  
Lengths: 40-120mm

# Blade Handle

The Side-Loading Retractor Blade Handle attaches to any retractor blade, creating a hand-held retractor that is used to place the blade into the operative site. A grooved handle is designed to enhance grip.

■ Dual Blade Holder - Holds two blades per side to accommodate multilevel procedures.

# Lighting

■ Phantom Light Source, Bright 52-watt LED light source, cool heat (48252106)

■ Lateral Phantom Light Cable, 10 Ft, Strong Curve, with Tedan Connector (48758451)

# Standard Set
