ProChondrix® CR
Cryopreserved Fresh Osteochondral Allograft

A single stage, natural solution for patients in need of articular cartilage repair.
**ProChondrix CR**

Cryopreserved Fresh Osteochondral Allograft

ProChondrix CR is a cryopreserved, fresh osteochondral allograft that contains live cells and other biological components for the repair of damaged cartilage tissues.1

ProChondrix CR can be used in a variety of orthopedic reconstructive procedures to aid in the repair of articular cartilage.2

**Extracellular matrix**

- The extracellular matrix is designed to help support a structure for cellular migration and adhesion while preserving growth factors.1

**Native growth factors**

- Presence of native growth factors may help maintain healthy cartilage and facilitate chondrocyte functionality.1

**Viable chondrocytes**

- Viable chondrocytes have been shown to be present and may aid in cartilage repair by generating extracellular matrix proteins that help promote chondrogenesis.1
