ReUnion® TSA
low-profile cannulated instrumentation
Cannulated dual-option centering guide

- Surface trial side is designed to allow for simultaneous implant sizing and accurate, centered pilot wire insertion
- Sharpened collar ring is designed to allow for fine adjustments of angulation to correct for glenoid wear

Cannulated half-moon reamers

- Sweeping helical leading edge helps deflect retractors during reaming
- Half-moon shape designed to help facilitate access to glenoid face over cut humerus
- Magnetic hex connection allows for simple assembly and disassembly

Low-profile instrumentation

- Cannulated Center Drill and Reamer Driver with a 40% reduction in distal shaft diameter* aids in navigation of glenoid space
- Straight and Angled Drill Drivers with magnetic, Modular Drill Bits
- Magnetic connection to drill bit releases in each hole, providing rotational stability to the guide and eliminating need for alignment pegs
- All peripheral holes prepared with one guide, then entire assembly removes as one piece

*A compared to original instrumentation

A surgeon must always rely on his or her own professional clinical judgment when deciding whether to use a particular product when treating a particular patient. Stryker does not dispense medical advice and recommends that surgeons be trained in the use of any particular product before using it in surgery. The information presented is intended to demonstrate the breadth of Stryker product offerings. A surgeon must always refer to the package insert, product label and/or instructions for use before using any Stryker product. Products may not be available in all markets because product availability is subject to the regulatory and/or medical practices in individual markets. Please contact your Stryker representative if you have questions about the availability of Stryker products in your area. Stryker Corporation or its divisions or other corporate affiliated entities own, use or have applied for the following trademarks or service marks: ReUnion, Stryker.
