

Elevate your approach with SmartRobotics™

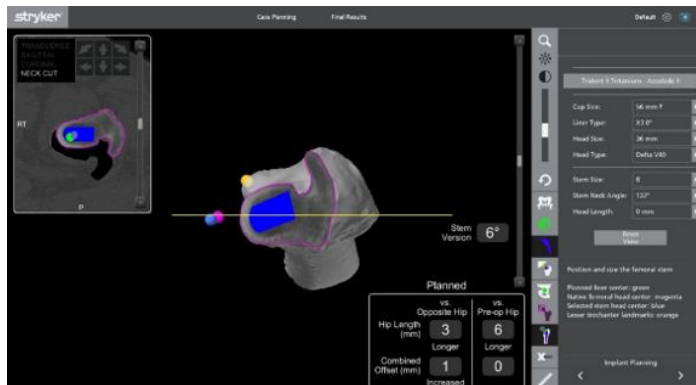

Direct anterior with Mako Total Hip

- ▶ With CT-based 3D modeling and new planning features, Mako Total Hip 4.0 provides unprecedented information with the goal of helping surgeons enhance patient outcomes. And when it comes to the direct anterior approach (DAA), where the field of view may be obscured, knowing more about a patient's unique anatomy can make all the difference.

Know more...so much more with new planning features

Neck resection view

Know more with a preoperative view of the planned stem that is in a position corresponding to what is seen intraoperatively, allowing for better assessment of the stem placement in the express workflow.

Pelvic tilt planning

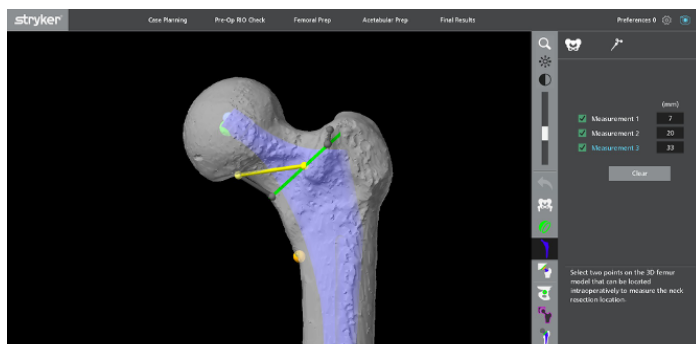

Know more with patient-specific cup positioning that takes into account a patient's pelvic tilt in the functional sit, stand and supine poses.

Digital ruler tool

Surgeons can now capture preoperative measurements to use intraoperatively so they can more easily plan and execute an accurate neck resection.

Preoperative

Intraoperative

Virtual range-of-motion impingement detection

Know more about the femur-to-pelvis and component relationship in different patient positions, detect potential impingement and adjust implant placement, type and/or size to address those potential impingement scenarios.

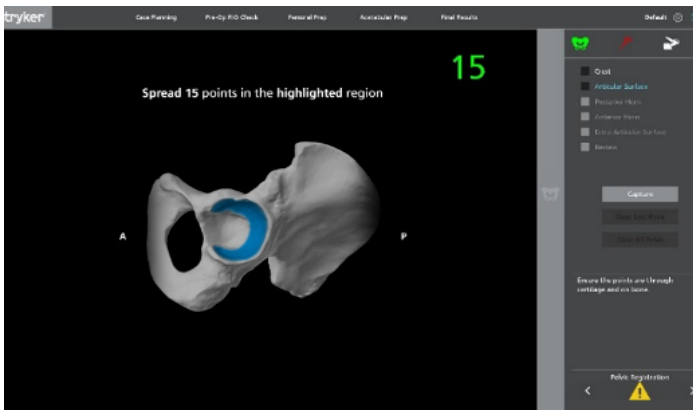

DAA-specific registration

Enhance your user experience with new approach-specific, region-based registration that has more accessible registration points for DA surgeons.

Crest landmark

Articular surface

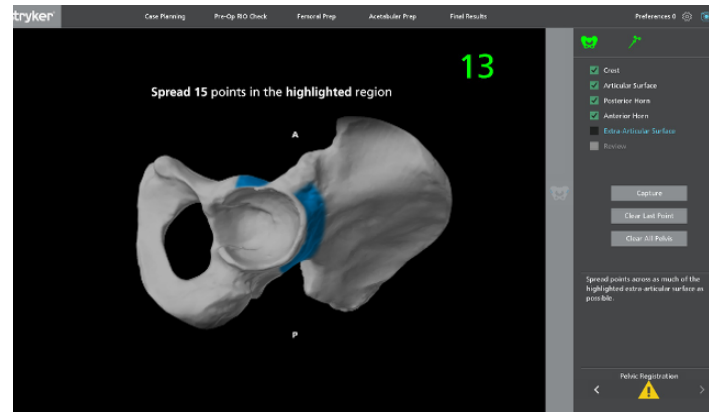

Posterior horn landmark

Anterior notch landmark

Extra-articular surface

Verification

Auto verification

Manual verification

Cut less¹

Only Mako features AccuStop™ haptic technology, which enables single-stage reaming and provides auditory, visual and tactile feedback that helps surgeons stay within the planned boundaries during bone prep and implant placement. This allows surgeons to cut what's planned precisely for each patient, and that can mean greater preservation of healthy bone¹ and decreased blood loss² when compared to manual surgery.

That's Mako Total Hip. That's SmartRobotics™
